

Plot of GDP Values of different sectors of economy in Canada by year

We observe that GDP of nearly every sector of the economy has shrunk from the previous year's numbers and we postulate that this could be due to Covid-19. The current numbers resemble similar levels as from 2017.

Transportation & warehousing and Service-producing industries are some of the sectors that seem to have been hit the hardest in 2020, dropping over 15% of their estimated GDP.

Plot of hours worked based on industry by year

As observed with GDP, hours worked has reduced in across every sector of the economy as compared to the previous years.

A surprising observation is that even in the Healthcare and Social assistance industry the numbers appears to have been down. This could be due to the fact that many nursing and healthcare facilities mandated the presence of authorized personnel only, so as to mitigate the risk of further spread of Covid-19.
